SKILLS

Frontend

React · Next.js · TypeScript · Tailwind CSS · Three.js · PWA

Backend & data

Supabase · PostgreSQL · PostGIS · Row Level Security · Node.js

Enterprise systems

Java · DB2 on IBM i · SQL Server · ERP · eVB · Windows CE

Method

Functional analysis · Test plans · Code review · Documentation · Git · Bitbucket

Tools & AI

Claude Code · Cursor · Docker · Linux · Vercel

NLP

Python · NLTK · XML · XSLT · TEI

LANGUAGES

Italian — Native

English — B2

MORE

Driving licence B · Own car

Volunteer: member of Vento e Vertigine APS, since 2024

Competitive padel · Chess

Full-stack developer: I build web apps and PWAs with React, Next.js and Supabase, and every day I work on an ERP system in Java and DB2. Co-founder of spostiamoci. Digital Humanities graduate from the University of Pisa, with a thesis in computational linguistics (NLP in Python). I take work from analysis to release — functional analysis, technical note, development, test plan, user manual — and I use AI (Claude Code, Cursor) as a sparring partner: the decisions stay mine.

EXPERIENCE

Co-founder & Full-Stack Developer · spostiamoci

Jun 2026 — present

Trust-based carpooling: you only travel with your own network (the «amoci»), up to the 3rd degree. Idea and vision by Valentina Elisa Camponovo; I own architecture and development, from the database to the installable product. In production. `spostiamoci.vercel.app`

- Frontend: Next.js 15 and React 19, PWA with Web Push notifications, Leaflet + Mapbox maps.
- Backend: Supabase, PostgreSQL + PostGIS, 150+ migrations. Travel-corridor matching, a trust graph with Row Level Security on every table, fair driver selection, reminders with pg_cron.
- samo: an AI assistant with server-side function calling that takes actions instead of just answering.

Full-Stack Developer (apprenticeship) · 01 INFORMATICA S.r.l.

May 2025 — present

Development and support on Codice01, the company's ERP system (Java, DB2 on IBM i), taking work from analysis to release. I also look after websites and customer support (WordPress, PHP).

- New features for orders, supplier delivery notes, shipping, labels and invoices: self-realigning order/delivery-note matching, mixed-bucket trolley loading, configurable VAT split on self-invoices.
- SQL performance: rewrote queries with non-sargable predicates, moving the seasonality logic from SQL to Java.
- Van sales: fixed and released the legacy eMbedded Visual Basic app for Windows CE (build environment rebuilt in a virtual machine), on-site rollout at a customer, analysis of handheld-terminal errors.
- j01modula: web app connecting the ERP to automated warehouses (DB2 and SQL Server), still operational when one of the two databases is down.
- Method: 30+ documents across functional analyses, test plans and user manuals, about forty technical notes; one branch per ticket, pull requests and code review on Bitbucket; an internal 12-page guide on using Claude Code to analyse support tickets.

Robotics & Computing Educator · Scienza Ludica APS

Sep 2024 — present

Educational robotics and programming workshops in primary and secondary schools in Prato and Pistoia, with LEGO Spike, Ozobot and Scratch. Member of the association.

FEATURED PROJECT

DigitaLions (formerly ServiceScore) · digitalions108la.it

Mar 2026 — present

The platform of Lions District 108 LA (Tuscany), designed and built entirely by me: database, permissions, interface and production deployment. About 3,000 members, 92 clubs, 7,000+ service activities.

- Role-by-page permission matrix enforced by the database (Row Level Security, column privileges): each officer sees their own club, zone or the whole district.
- Dashboard refreshed every night from Lions International's official statistics, with automatic retries; full import from the official portal with total checks.
- «La Sfida dei Leoni» (the Lions' Challenge): scoring and ranking engine across clubs, following the District's rules.

Next.js · React · TypeScript · Tailwind CSS · Supabase (PostgreSQL) · Vercel

EDUCATION

BA in Digital Humanities · University of Pisa

Nov 2018 — Apr 2023

grade 98/110. Thesis in Computational Linguistics: NLP analysis of a corpus of gold-medal texts in Python with NLTK (tokenisation, POS tagging, named entity recognition). Text encoding with XML, XSLT and TEI.

Technical Diploma in Computer Science · ITTS «Fedi-Fermi»

Sep 2013 — Jun 2018

grade 78/100. Final paper: «The Digital Revolution compared with Anarchy».

I authorise the processing of the personal data in this CV under EU Regulation 2016/679 (GDPR).
